

## Vehicle Data Systems

### QUESTION?

Is there a book or reference manual that gives locations of airbags first responders can use a reference? Possibly a website?

### REPLY:

There are several sources that provide the info you are asking about. Holmatro, the rescue tool manufacturer, has a book and a CD version that provides critical info on vehicles including small trucks.

<http://www.holmatro-usa.com/notify.htm>

Also, a company based in The Netherlands has introduced an electronic version that is interactive and very detailed. Hurst-Centaur, the rescue tool manufacturer, now is the sole US distributor. The system is called the Crash Recovery System® by Moditech Rescue Solutions®. Contact a local Hurst Rescue Tool dealer for info.
